

PROGRAMMERS WANTED

DEXAGON is a multi-faceted technology company. Since 1995, Dexagon has been delivering high-quality, robust, and reliable solutions for clients in the areas of **Web Based Applications**, **Smart Buildings**, and **Database Hosting**.

We are currently looking for a **junior programmer** to help build web-based applications.

Introduction:

This is a great learning environment. The experience you gain here working with our programmers will serve you well in the future. We use many different languages, and tools, which provides a broad base of knowledge, and experience.

- Co-op students welcome, Internship available, contract possible
- This is a full-time, 3-month contract (but it could be extended)
- We are seeking a Jr. Programmer to join the team.

Technical:

- Required Knowledge: Perl, MySQL, Javascript, HTML, CSS, JQuery, Linux Server
- Programming small, independent, target-based subroutines
- Testing subroutines in existing client applications, including GUI functions
- Testing existing and new subroutines for compliance with client requirements
- Writing Programmer Documentation and User Documentation
- Working as a team member during brainstorming sessions
- Demonstrated ability to find bugs in software and work with your team to fix them
- Demonstrate knowledge and understanding of software testing practices
- You should have a minimum of 1-2 years of experience in application development

Work Environment:

- Office is located in midtown Toronto, near subway. This is NOT a remote work job.
- Demonstrated ability creating user interfaces
- High attention to detail
- Visually focused content development
- Effective time management skills to be able to juggle and prioritize multiple tasks
- Effective team player in problem solving, sharing of ideas and helping the group
- Independent worker, able to handle tasks with minimal direction and supervision
- Strong communication skills, listening skills, and written and oral skills
- Service driven, approachable, able to deal with concerns in an effective manner
- Strong system problem determination, troubleshooting, and resolution skills.
- Ability to work well under pressure.
- Ability to adapt and learn new technologies quickly
- Strong understanding of business requirements
